Skills

Frontend Web and iOS Development

Graphic, UX, and Game Design

Visual Storytelling

Relevant Work Experience

Freelance *Designer and Engineer* Dec 2026 - present

Working with companies including Credal.ai and Tilework, providing guidance with user research, human-centered design, and frontend architecture as well as implementing features using React, Vue.js, Lynx, and Next.js. Redesigned and rebuilt user-centric versions of multiple complex and technical AI tools.

SOOT *Designer and Engineer* Dec 2021 - Oct 2025

Built a new visual mapping tool using all new UX design paradigms. Ran a product team of engineers and designers, and architected a sophisticated webapp frontend. Worked along with the team as a designer, creative coder, engineer, and UX researcher. Used Node.js, WebGL, Vue.js, GraphQL, Terraform, AWS, NoSQL databases, Python, and machine learning for implementation.

Meta *Software Engineer* Sep. 2018 - Dec 2021

Built multiple internal tools designed to enable a strong and fast privacy review process and enforce implementation of the outcomes of privacy review. Co-designed with internal customers to enable rapid scaling of the privacy review as the company renewed its focus on privacy. Managed privacy incidents, focusing on ensuring timely remediation and prevention of future issues. Worked with React, Hack (PHP), and GraphQL.

Google *Software Engineering Intern* Summer 2016, 2017

Built multiple frontend features to Google Slides on iOS, using native Objective-C and C++ and cross-platform Javascript. Added UI features to Google Translate within Google Search and on mobile web. Worked with Objective-C, Javascript, Java, and C++

University of Maryland, College Park

Computer Science major
Graphic Design program
Minor in **Mathematics**

Design Cultures and Creativity Honors

Computer Science Honors

GPA 3.83

Graduated Spring 2018

Research

SOOT
2021-2025

Creating cutting-edge hypervisual user interfaces using embedding spaces and data visualization techniques

Machine-learning-based software application and tool menu, Patent issued 2024

Makeability Lab at UMD
2013, 2016

Web development and data analysis for ProjectSidewalk with Prof. Jon Froehlich, using machine learning and crowdsourcing to study the accessibility of DC's streets. Developed data visualizations for Project Thermal with Prof. Froehlich, focusing on the uses of cheap consumer thermal cameras. Used D3.js, JQuery, and PHP.

A Temporal Thermography System for Supporting Longitudinal Building Energy Audits, UBICOMP 2017

An Initial Study of Automatic Curb Ramp Detection with Crowdsourced Verification Using Google Street View Images, AAAI Conference on Human Computation and Crowdsourcing 2013

IDEAL Lab at UMD
2015-2016

Worked with Prof. Mark Fuge on research on reducing sets of complex 3D objects to a semantic space using machine learning and mathematical techniques to make digital design of objects easier for non-experts. Developed toy datasets representing specific types of semantic spaces, created visualizations, and worked on metrics. Used Matlab.

Design Manifolds Capture the Intrinsic Complexity and Dimension of Design Spaces, Journal of Mechanical Design 139, 2017

How Designs Differ: Non-Linear Embeddings Illuminate Intrinsic Design Complexity, IDETC 2016

Accolades

HackMIT 2016 Winner, 2017 Top 10 Finalist

DC Area Addy Award Winner 2017
(Student Silver Medal)

Flux Student Design Award 2018 Winner
(Web/Interactive)
